

Product Name

Edge Web Link™

Product Screenshot

Brief Description

Edge Web Link™ provides a permissions controlled web view of Edge 2004™ records and management features to meet the demands of today's customers. Edge Web Link™ is a secure web browser accessible server application that is linked directly with customers' Edge 2004™ thick Client Application that grants users easy and secure access to add, store, retrieve, email and share documents stored in Edge 2004™ over the Internet, Intranet, Wide Area Networks and VPN connections.

Full Description

The Edge Web Link™, a .net application, provides Edge 2004™ users secure local and remote access to their records without the need for a client application. The product resides on an IIS server and your database and the Image Directory can reside on the same server or a separate server. Edge Web Link™ allows users to Add, Delete, Edit, View, and View Properties of the folders that they have permission to access. Documents can be Added, Deleted, and Emailed through the Edge Web Link™ client based permissions. Folders and documents are protected by permissions. The owner of a folder or document can give individual or group permissions that allow only those specified users to view or edit the document.

Edge Web Link™ will provide secure access to your records from anywhere by anyone with permissions based on a valid username and password stored within the Edge Web Link™ Server or Active Directory.

Administrators will only have to update information once for each different client application configuration of Edge 2004™. Access is protected using an ID and Password in Edge Secure Admin, or Active Directory. Edge Web Link provides for SSL and HTTPS encrypted access. RSA or USB Token security is available for dual authentication.

Edge Web Link™ goes hand-in-hand with our Edge 2004™ Client/Server application. Since the thick and thin clients share the same database and image directory, all files and folders created or updated in one will be available in the other. Edge Web Link™ logs all access and changes by user access ID and password.
