Product Name

MedLink™

Product Logo

Brief Description

MedLink is a browser based web application that provides a permissions controlled view of MedDocs features for secure remote patient electronic health records access and management to meet the access anywhere demands of today's healthcare providers.

Full Description

MedLink is a secure web browser accessible .net application that directly connects authorized MedDoc users MedDocs Application and grants users secure and easy access to all the MedDoc features except for the ability to scan direct over the Internet, Intranet, Wide Area Networks and VPN connections. MedLink provides safe and secure communications and access to patient HER. MedDocs can also be used for the Healthcare Provider to provide the Patient safe and secure access to their records.

The product resides on a Microsoft IIS server and your MedDocs database and the Image Directory can reside on the same server or a separate server. Administrators will only have to update information once for each different client application configuration of MedDocs™. Access is protected using an ID and Password in the MedDocs Secure Admin, or Active Directory. Edge Web Link provides for SSL and HTTPS encrypted access. RSA or USB Token security is available for dual authentication.

Since the thick and thin clients share the same database and image directory, all files and folders created or updated in one will be available in the other. Med Link™ logs all access and changes by user access ID and password and can provide point to point encryption using SSL or HTTPS.
